

DAVID OKPE

Full-Stack Developer

Lagos, Nigeria · +2348075612932 · okpedavid0@gmail.com · LinkedIn · GitHub · davidokpe.cv

PROFESSIONAL SUMMARY

Full-Stack Developer building web applications, e-commerce platforms, dashboards, and business systems with JavaScript, TypeScript, React, Next.js, Vue, and Node.js.

Experienced in frontend and backend development, databases, REST APIs, payment integrations, subscriptions, admin systems, and workflow-driven applications.

I translate business requirements and existing processes into practical software, working across the stack from user interfaces and application logic to databases and third-party integrations.

TECHNICAL SKILLS

Languages: TypeScript, JavaScript

Frontend: React, Next.js, Vue, Vite, Tailwind CSS, Zustand, Redux, Responsive UI, Component Architecture

Backend: Node.js, Express, Fastify, REST APIs, API Development

Databases: PostgreSQL, Supabase, SQL

Tools: Git, GitHub, Vercel, Figma

EXPERIENCE

JelloSite

Full-Stack Developer | Oct 2025 – Present

- Build and improve production features for an e-commerce platform used by businesses to create and manage online stores.
- Develop product management functionality including product variants, options, product uploads, and bulk product uploads.
- Work on e-commerce workflows including checkout and payment integration.
- Build and improve admin dashboard functionality for managing and monitoring platform operations.
- Contribute to analytics features that provide businesses with visibility into store activity.
- Work across frontend, application logic, databases, and production systems to implement business requirements.
- Collaborate with developers through code reviews and structured development practices.

Selected contribution: Bulk product upload workflow with AI-powered product description generation.

Ruumies

Full-Stack Developer | Contract | 2025

- Joined an existing product midway through development and worked across the codebase to help bring the product toward completion.
- Implemented payment integration and improved booking workflows.
- Worked across customer-facing functionality and administrative functionality.
- Fixed existing issues and inconsistencies while extending the product as requirements evolved.

Connected different parts of the application into a more complete end-to-end user flow.

Darllix

Lead Developer | 2025 – Present

- Built a multi-tenant e-commerce platform for independent vendors to manage storefronts, products, orders, and online businesses.

- Developed vendor-facing functionality for managing products, orders, customers, and day-to-day storefront operations.
 - Worked across storefront, product management, order management, and checkout workflows. ·
- Connected customer-facing experiences with vendor and platform functionality.

SELECTED PROJECTS

Qaffy

CustomOperations Platform | Full-Stack Developer

Custom software built for a laundry business in Abuja to manage customer, logistics, vendor, administrative, payment, and operational workflows.

- Built a multi-role system covering customer, logistics, vendor, and admin workflows.
- Developed customer ordering, invoicing, payments, subscriptions, notifications, settings, and referral functionality.
- Built OTP-based pickup and delivery workflows for logistics operations.
- Developed vendor workflows for recording received items, identifying quantity mismatches, and determining final charges.
- Implemented subscription allowances and additional-charge logic based on final quantities.
- Built administrative functionality for orders, customers, analytics, categories, rates, plans, partners, and financial operations.
- Implemented server-authoritative pricing and payment logic with Paystack and webhooks. · Built PWA and notification functionality for customer order updates.
